International Pilot Framework

Clinical Continuation & Structured Implementation

When Science Meets Conscience

Why Now

Global healthcare systems face increasing complexity in chronic pain and neurological recovery. Translation of neuroscience into clinical environments remains limited. Israel provides a unique environment combining innovation and clinical expertise.

Core Problem

Validated scientific findings remain underutilized due to lack of structured clinical frameworks bridging research and real-world application.

Synativ Solution

A structured translational platform converting scientific insights into controlled clinical implementation frameworks.

Pilot Structure (6 Months)

Phase 1 – Protocol Structuring

Phase 2 – Clinical Implementation

Phase 3 – Evaluation & Replication

Budget Allocation – 478,000 ₪

- Protocol development
- Clinical supervision
- Data collection
- Scientific oversight
- Scalability preparation

Expected Impact

- Structured clinical frameworks
- Research-to-clinic translation
- International scalability
- Stronger collaboration

10-Year Vision

Creation of an international network of clinical implementation centers integrating neuroscience and rehabilitation.

Founder

Haim Berrebi – Founder of Synativ Research Center, focused on translational neuroscience and clinical innovation.
